Modular security

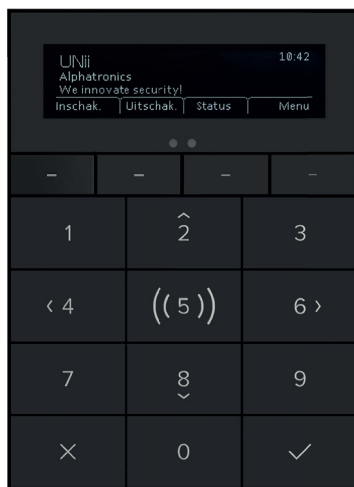

Business

UNii, modular security

A safe working environment is essential for the continuity of a company. The UNii can play an important role in the realization of that safety. Aesthetically designed and invisible in some places, the sensors detect motion, smoke and water leakage to ensure a safe working environment. The operation of the keypad is intuitive and simple. No fear for your employees to operate the system.

For all situations

The UNii alarm system can be used for all situations in offices, shops, schools, public institutions and even in production facilities. The UNii is adjustable for every risk class and type of application. The modular structure ensures that if changes occur in the organization or security needs the system can easily be expanded without needing the costly replacement of hardware.

Advantages mySmartControl App

Remote control

Manage your home easily with the app. Arm and disarm the system with a single press of a button.

Push notifications

Receive push notifications immediately in the event of an alarm or arming/disarming. Even if your phone is set to silent mode.

Chat function

Communicate easily and quickly with family members using the built-in chat function. This way everyone is aware of the status of notifications sent.

Fire

The UNii is not only used for intrusion detection, but is also ideal for fire detection. Easily expand the system with reliable wireless or wired smoke detectors and you will be warned in time in the case of a fire alarm.

Access

The UNii access reader uses the reliable DESFire EV2 reading principle and therefore belongs to the safest technology on the market today. Open doors or arm/disarm turn the alarm system easily with a stylish tag that can be attached to your keys.

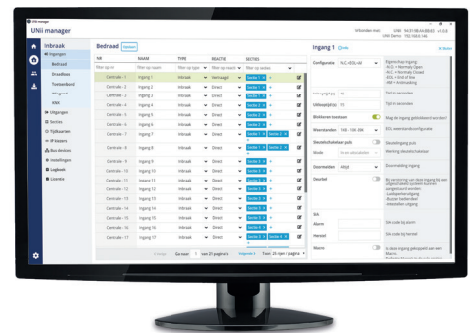

Modular, focused on the future

The UNii has a modular structure. This means that later expansion is always possible without having to replace the control panel. An extra smoke detector in the attic? No problem! The system can support up to 64 wireless components. This way it's always possible to adjust the system to future needs and expectations.

UNii manager

Configuration software should be as user friendly as possible. Both during commissioning an installation of the system as well as during maintenance or service. The UNii manager has been designed for this. Clear screens guide the engineer through the system step by step. Options are explained with a simple click. Just like the UNii, the UNii manager is multilingual and set per user. Various options are available for the end user. For example, users can be created or the eventlog can be viewed.

Applicable:

- Schools
- Stores
- Office buildings
- Commercial buildings

About Alpatronics

The UNii is developed and produced by Alpatronics. A Dutch company that has been the specialist in intrusion detection and security products for decades. Solutions are designed in collaboration with customers and end users. This way the solutions fit seamlessly with the changing demand of the user. Safety, user-friendliness and simple installation have been core demands for the development of the UNii. Dealing directly with the manufacturer that can provide direct support, the UNii is a perfect solution for every security need.
